

## Preparing Learners for Success in Technical Assessments

With the move towards qualifications with far more emphasis on exam based and synoptic assessment, the need to prepare learners for this is imperative. The need to understand and improve working memory and resilience capacity are at the heart of success in exam based assessment.

This in-depth training will ensure teachers recognise how learners learn and the mindset required for students to be successful. There will be opportunities to investigate and explore different pedagogical processes to support learning and raise attainment by developing working memory, resilience and exam technique.

This workshop will incorporate:

- Analysing the impact working memory has on learning and exam preparation
- Exploring how resilience plays a role in learners' achievements
- Identifying the characteristics of learners with low working memory
- Evaluating different strategies to develop working memory and build resilience
- Creating strategies to support all learners in exam preparation
